

# **Intune Setup and Application Deployment - Summary**

## **1. What are the steps to set up Intune deployment?**

Set up Intune

Get licenses, sign in, and assign roles.

Add and protect apps

Decide which apps to deploy and configure protection policies.

Create compliance policies

Define rules for secure and healthy devices.

Configure device settings

Apply Wi-Fi, VPN, security, and configuration profiles.

Enroll devices

Connect user devices to Intune for management.

## **2. What are the steps for Intune application deployment?**

Intune Application Deployment (Simple Explanation):

Set up Intune subscription

Get a license and activate Intune for your organization.

Add, configure, and protect apps

Decide which apps users need and set protection rules for them.

## **Intune Setup and Application Deployment - Summary**

Create compliance policies

Define what a "secure" or "healthy" device looks like (e.g., must have a password).

Configure device settings

Apply settings like Wi-Fi, VPN, encryption, etc., to devices.

Enroll devices

Connect users' devices to Intune so they're managed and secured.
